continuation sheet of 11:

Applicant's arguments filed on January 19, 2011 have been considered but they are not persuasive. Applicant essentially argues that Razavi's teaching is not relevant to the claimed invention with the rationale that Fig 6 of Razavi'does not concern land Q channel and Fig 16 is only in analog domain. Examiner would like to point out that Fig 6 shows a baseband pulse shaping operation that includes a shaping filter inplemented in the baseband digital domain (stored in a ROM) and a digital to signal converter (DAC). The output of DAC is then an analog signal to be up-converted to RF frequency. Razavi also teaches such baseband shaping filter is applied to IS-54, IS-95 and other spread spectrum based standard (page 198). In fact, the baseband shaping filter has been specified various wireless communication standards, including IS-54 and IS-95 as described in Razavi. An ordinary skill in the art would understand that, in IS-95 for example, the baseband signals include I signal and Q signal. Such shaping filter would have to be applied to I and Q signals to condition the transmission signals in order to meet FCC regulation and requirement with respect to out of band inferences. Fig 20 shows the direct conversion in the analog domain farter the shaping filter and DAC). Therefore, Razavis teachings include both digital and direct conversion in the rejection of previous office action is maintained.

Amendments to claims 6-8 and 14-16 have been considered. The objection to claims 6-8 and 14-16 have been withdrawn.
